SUMMARY

Computer Science undergraduate (CGPA 3.70) with a six-month AI Engineering Bootcamp behind me. I build practical end-to-end AI applications: agent orchestration with LangGraph, advanced retrieval with Chroma, BM25 and knowledge graphs, REST APIs with FastAPI, and containerized deployment with Docker.

PROJECTS

Multi-Agent AI Blog Generation System

Python, LangGraph, LangChain, FastAPI, Gemini, Groq, Docker

- Built a Researcher, Writer, Editor, Router workflow in LangGraph instead of relying on a single prompt.
- Exposed the workflow through a FastAPI REST endpoint; used Gemini and Groq for inference.
- Containerized with Docker for reproducible execution.

github.com/abdulrazaqkhan6070/langraph_blog_agent

Advanced Hybrid RAG and Agentic Retrieval System

Python, LangChain, LangGraph, Gemini, ChromaDB, BM25, NetworkX

- Combined vector search (Chroma) with BM25 keyword retrieval and knowledge-graph retrieval (NetworkX).
- Implemented a query router that selects the retrieval strategy per question; added web search for current information.
- Designed as modular components for ingestion, retrieval, graph knowledge, routing, and external tools.

AI Job Application Agent

n8n, Gemini, Remotive API, Google Sheets, SMTP, Docker

- Built an n8n workflow that takes a CV through a web form, extracts the text, and uses Gemini to identify the target role and location.
- Fetches remote jobs from the Remotive API, scores each one against the CV (0-100) with Gemini, and filters by a minimum match threshold.
- Skips jobs already saved in Google Sheets, emails the candidate an approval request for each new match, and for approved jobs generates a cover letter and application message and saves them to the sheet.
- Self-hosted with Docker.

GitHub Information Assistant

n8n, AI Agent, GitHub API / GitHub Tools, LLMs, Tool Calling

- Built an n8n workflow with a GitHub-connected AI Agent that answers GitHub questions in natural language through tool calling.
- Retrieves public profile details (name, company, blog, location, followers, following) and repository information for a given user or organization.
- Explains clearly when a requested GitHub operation is not supported.

Facial Emotion Detection using YOLO11

Python, YOLO11, PyTorch, OpenCV, Google Colab

- Fine-tuned a pretrained YOLO11n object-detection model to detect and classify 9 facial expressions: Angry, Contempt, Disgust, Fear, Happy, Natural, Sad, Sleepy, and Surprised.
- Developed the full training and evaluation workflow in Google Colab on an NVIDIA Tesla T4 GPU with a YOLO-format dataset; trained for 10 epochs at 416x416, batch size 16.
- Evaluated with precision, recall, F1-score, and mAP: 53.1% precision, 55.0% recall, 58.7% mAP@50.

Pneumonia Detection from Chest X-rays

Python, PyTorch, ResNet18, Transfer Learning

- Fine-tuned a pretrained ResNet18 (ImageNet weights) to classify chest X-rays as NORMAL or PNEUMONIA, using class-weighted loss for class imbalance and augmentation.
- Trained on 5,232 images and tested on 624 (Mendeley Data); achieved 81.25% test accuracy, 98.72% pneumonia recall, 86.81% F1, and 0.9418 ROC-AUC.
- Compared three experiments (baseline, threshold optimization, extended fine-tuning); added an inference script returning predicted class and confidence.

Amazon Sales Analysis

Python, Pandas, Matplotlib, Seaborn

- Data cleaning, visualization, and business-focused analysis of Amazon sales data.

github.com/abdulrazaqkhan6070/Amazon-sales-analysis

TECHNICAL SKILLS

LLM and agents: LangChain, LangGraph, RAG, Advanced RAG, Multi-agent systems, Tool calling, LLM routing, Prompt engineering, Embeddings, Vector search, Hybrid and graph retrieval

Backend and DevOps: FastAPI, REST APIs, Docker, Git and GitHub, CI/CD basics, n8n, ChromaDB, Linux and WSL

ML and data: PyTorch, TensorFlow, CNNs, RNNs, LSTMs, YOLO, Transfer learning, OpenCV, NumPy, Pandas, Matplotlib, Seaborn

Languages: Python, C++, SQL, HTML, CSS

LLM platforms: Gemini, Groq, OpenRouter, Ollama

TRAINING

AI Engineering Bootcamp - Hiraible (Zigron), Islamabad

Apr 2026 - Sep 2026 | Completed

Six months of applied work in machine learning, deep learning, computer vision, generative AI, LLM applications, LangChain, AI agents, RAG, backend development, CI/CD, and Docker.

EDUCATION

BSc Computer Science - Pakistan

Currently in 4th semester | CGPA 3.70

Data Structures and Algorithms, Database Systems, Computer Organization and Architecture, Linear Algebra, Statistics and Probability.
